

Abubakar Rabi'u Baba (Sadik)

Junior Backend Developer · Python · Django · Django REST Framework

Nigeria sadikbaba360@gmail.com github.com/sadikbaba linkedin.com/in/abubakar-baba-452346424

Backend-focused developer working mainly with Python, Django, and Django REST Framework. I build REST APIs, authentication flows, and database-backed applications, and I have hands-on experience deploying Django on Linux with Gunicorn and Nginx. I am continuing to strengthen my backend, database, testing, and deployment skills while gradually building toward AI engineering.

EDUCATION

CURRENT

Undergraduate Student

Arab Open University, Cairo

PROJECT EXPERIENCE

HANDS-ON

Backend & API Development

Built Django and Django REST Framework applications with REST APIs, authentication, permissions, CRUD operations, and database-backed features.

HANDS-ON

Production Deployment

Deployed a Django application on Linux using Gunicorn and Nginx, configured the environment manually, and troubleshoot SELinux issues during deployment.

IN PROGRESS

AI Engineering

Learning practical AI foundations and building toward LLM applications, local models, RAG, agents, and developer-focused AI tools.

TECHNICAL SKILLS

Languages

Python, JavaScript, HTML, CSS

Backend

Django, Django REST Framework, REST APIs

Databases

PostgreSQL, SQLite, Django ORM

Authentication & security

Session authentication, token authentication, permissions, CSRF, authorization, JWT fundamentals

Testing & development

API testing, debugging, automated testing fundamentals, Git/GitHub

Deployment

Linux (Fedora), Gunicorn, Nginx, environment configuration

Frontend

JavaScript, DOM, responsive CSS, Vite, npm

Currently developing

React, Docker, Redis, Celery, AI/LLM engineering

Core stack

Python · Django · Django REST Framework · REST APIs · PostgreSQL · SQLite · Django ORM · Git/GitHub · Linux · Gunicorn · Nginx · JavaScript · Vite

SELECTED PROJECTS

Backend Engineering

Project-based backend engineering work with Python, Django, and Django REST Framework. Current work covers REST API design, session authentication, token authentication, CSRF/CORS handling, and frontend-to-backend API integration.

Data Structures and Algorithms

Structured Python practice focused on data structures, algorithms, problem-solving, and time and space complexity.

Frontend Mastery

Structured frontend practice covering JavaScript, DOM, public APIs, localStorage, Vite, and modern frontend tooling.

Full stack development

Hands-on deployment engineering practice covering Linux services, networking, ports, SSH, environment configuration, and production infrastructure fundamentals.

AI development foundation

AI foundations work covering intelligent agents, problem formulation, state-space search, heuristics, BFS, DFS, and Greedy search through small Python projects.

CAREER DIRECTION

Backend Development · AI Engineering
